

Circum Planter

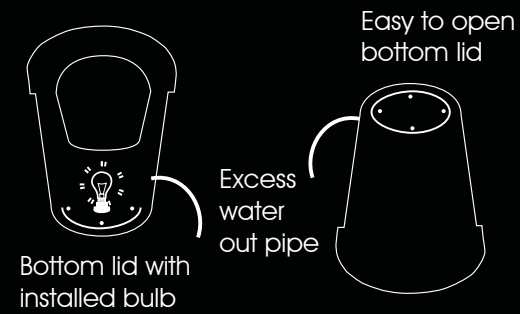

Circum Planters are wider with larger base and body which makes them best suited for outdoors application. Giving them a robust look and form, we have made these Planters very symmetrical to give a uniform sight from all points of perception.

Hand crafted to perfection Circum Planter is a contemporary product design extending the form and shape of classic design of a gardening pot. Built from premium food grade plastics, Circum Planter's body is added with translucency, to give a uniform lighting around the areas of applications.

These Circum Planters are available in various shapes and sizes, offered in multiple colours and lighting options as per your application needs.
